CrossAssetResearch@lyxor.com

Merger Arbitrage has been the most resilient hedge fund strategy during the recent market sell off. The ability of the strategy to protect capital in bad times is something we underlined in the past and which is based on historical evidence (see page 2). This contributes towards explaining why we have been and remain highly constructive on the strategy (at Overweight). Since February 18th, the equity market peak, Merger Arbitrage is down -0.4%, while a 50/50 portfolio of equities and bonds is down -4.6% (based on MSCI World and Barclays Global Aggregate Bond Index, up to March 3rd). The strategy was resilient in a context where deal spreads were stable up to February 28th and widened afterwards.

Concurrently, cash levels in portfolios were elevated in early 2020. Seasonal factors, along with the tightness of deal spreads and the completion of several transactions in Q4 all contribute towards explaining why Merger Arbitrage strategies had elevated cash levels before the selloff. The recent widening of deal spreads (see chart) thus brought opportunities to deploy capital in high conviction deals, i.e. those with an attractive risk reward profile. Gross spreads on friendly deals have gone from 1% to roughly 2-3% in recent days. Managers started to deploy capital in a number of deals that they have already been invested in, such as Allergan vs. AbbVie and Tiffany vs. LVMH, to name a few. Managers also deployed capital in recently announced transactions such as HP vs. Xerox, E*TRADE vs. Morgan Stanley and UBI vs. Intesa. For some managers, we have seen gross exposures climbing significantly, from 60-70% to 90-100% of net assets.

Apart from Merger Arbitrage, it is important to highlight the fact that L/S Credit and EM Macro strategies have also been resilient since Feb 18th (-0.6% and -1%, respectively). Our stance remains at Overweight on both strategies. On a negative note, CTA and Directional L/S Equity strategies underperformed during the same period (-3.6% and -3.2%, respectively). Our stance remains at Neutral and Underweight, respectively. Yet, within these strategies, dispersion is elevated. The best performing CTA and Directional L/S within our samples still managed to post positive returns during this troubled period.

Merger Arbitrage has largely been isolated from market volatility; widening deal spreads as an opportunity

Risk assets experienced wide gyrations as the spreading of the COVID-19 will probably cause sharp losses in economic activity in Q1 and potentially in Q2.

In line with the previous week, hedge fund strategies outperformed traditional markets. The Global Lyxor UCITS Peer Group was down -1.2% last week, versus -4.4% for the MSCI World and +0.7% for the Barclays Global Aggregate Bond Index. CTAs underperformed due to their short EURUSD and long equity positioning. But the losses were overall contained thanks to long positions on fixed income and precious metals. They have cut their long equity positions since mid-February. Since the virus outbreak in early 2020, L/S Credit, Merger Arbitrage, and Market Neutral L/S strategies outperformed, due to their low market directionality.

How Merger Arbitrage fared in bad times

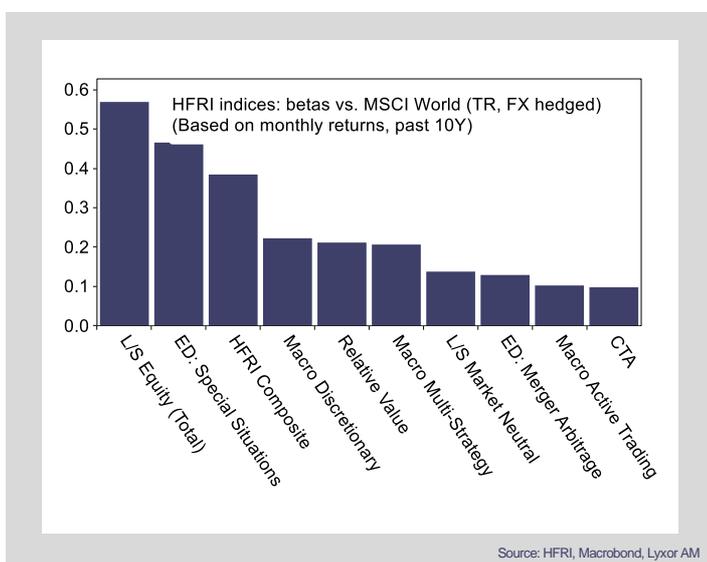

Merger Arbitrage is a strategy that has historically been resilient in bad times, when risk assets sold off severely.

During the Global Financial Crisis in 2008, the strategy was down less than -5% while the MSCI World was down almost -50% (from October '07 to March '09). Such pattern is also observable between 2000 and 2003. During this period, Merger Arbitrage was up +15% when the MSCI World was down -45%.

How can we explain such resilience? First, Merger Arbitrage is a low beta strategy. Over the past twenty years, we estimate its beta versus the MSCI World at below 15% (based on HFRI). It is thus structurally somewhat isolated from wider market moves. Second, Merger Arbitrage is an active strategy. Under such circumstances, managers have reduced the duration of the portfolio and concentrated it on high conviction deals.

Which strategy in current market conditions?

The spreading of the COVID-19 globally and the measures adopted by the authorities to mitigate it are causing a sharp slowdown/ contraction in economic activity. Markets have been particularly volatile as the probability of a global recession (i.e. two consecutive quarters of negative growth) increased.

In a worst-case scenario, the selloff continues for several months. CTAs, Merger Arbitrage, Global Macro, and Market Neutral L/S would be our preferred strategies to protect portfolios in this scenario.

Our base case is that risk assets stay volatile in the coming weeks but eventually bounce back in early Q2. In this scenario, L/S Credit and Global Macro would face hurdles but still outperform, while Merger Arbitrage would remain the outperforming strategy.

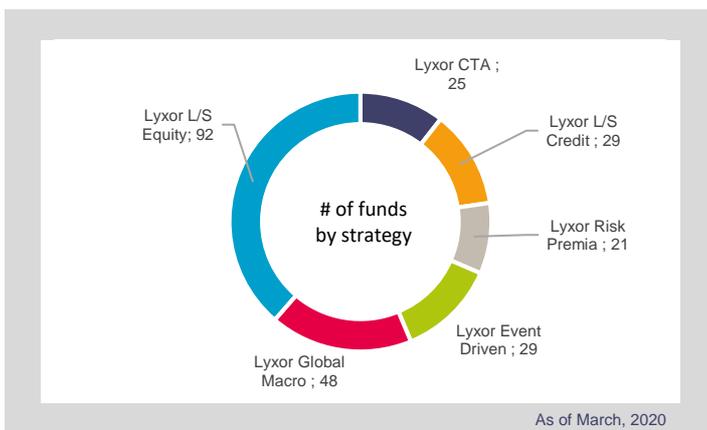

METHODOLOGICAL APPENDIX

The information contained in this report on the performance of hedge funds is based on publicly available information. The universe of underlying funds is relatively stable but varies depending on the criteria of inclusion presented below. It is based on an unbiased selection from our hedge fund analyst team.

Performance is calculated on a weekly basis, as of end-Tuesday, using an arithmetic average (equally weighted average).

Regarding share classes used in these peer groups, we selected the primary share class as referenced in Bloomberg. Non-USD share classes are hedged in USD based on hedging costs available on Bloomberg.

Lyxor Hedge Fund Peer Groups: number of funds by strategy

- 244 strategies across the main categories in the industry
- USD 208 billion of assets under management

Criteria of inclusion

The criteria of inclusion are fourfold:

- We only include UCITS strategies;
- Assessment by Lyxor's Hedge Fund selection team based on funds' materials or manager interaction;
- We only include strategies with assets under management of at least USD 50 million; and
- We only include strategies with at least a one-year track record.

SG, Lyxor AM and their affiliates assume no fiduciary responsibility or liability for any consequences, financial or otherwise, arising from an investment in any security or financial instrument described herein or in any other security, or from the implementation of any investment strategy. Lyxor AM and its affiliates may from time to time deal in, profit from the trading of, hold, have positions in, or act as market-makers, advisers, brokers or otherwise in relation to the securities and financial instruments described herein. Service marks appearing herein are the exclusive property of SG and its affiliates, as the case may be.

Hedge funds may invest in futures and other derivative instruments. Futures trading and other derivatives may permit extremely high degrees of leverage and expose the funds to, among other things, volatility, market illiquidity, market risks, legal risks and operational risks. Hedge funds may be exposed to risks relating to non-domestic markets, including, without limitation, risks relating to currency exchange, tax, lack of liquidity, market manipulation, political instability and transaction costs. An investment in a hedge fund is subject to a total loss. This presentation contains the views of Lyxor AM analysts and/or strategies. The views espoused in this presentation may differ from opinions and recommendations produced by other departments of SG.

Note about Indices: Indices are not available for direct investment. A comparison to an index is not meant to imply that an investment in a fund is comparable to an investment in the funds or securities represented by such index. A fund is actively managed while an index is a passive index of securities. Indices are not investable themselves, and thus do not include the deduction of fees and other expenses associated with an investment in a fund. Not all the funds that comprise indices cited herein are suitable for U.S. investors as a result of, among other things, the implementation of the Volcker Rule. Please see the offering documentation for these funds for more details.

Notice to U.S. Investors: Any potential investment in any securities or financial instruments, the categories of which are described herein, may not be suitable for all investors. Any prospective investment will require you to represent that you are an "accredited investor," as defined in Regulation D under the Securities Act of 1933, as amended, and a "qualified purchaser," as defined in Section 2(a)(51) of the Investment Company Act of 1940, as amended (the "40 Act"). The securities and financial instruments described herein may not be available in all jurisdictions.

Investments in or linked to hedge funds are highly speculative and may be adversely affected by the unregulated nature of hedge funds and the use of trading strategies and techniques that are typically prohibited for funds registered under the '40 Act. Also, hedge funds are typically less transparent in terms of information and pricing and have much higher fees than registered funds. Investors in hedge funds may not be afforded the same protections as investors in funds registered under the '40 Act including limitations on fees, controls over investment policies and reporting requirements.

Notice to Canadian Investors: Any potential investment in any securities or financial instruments, the categories of which are described herein, may not be suitable for all investors. Any prospective investment will require you to represent that you are a "permitted client," as defined in Canadian Regulation National Instrument 31-103, and an "accredited investor," as defined in National Instrument 45-106. The securities and financial instruments described herein may not be available in all jurisdictions of Canada.

For more information, U.S. and Canadian investors and recipients should contact Lyxor Asset Management Inc., 1251 Sixth Avenue, New York, NY 10020 or invest@lyxor.com.

Notice to U.K. Investors: This communication is issued in the UK by Lyxor Asset Management UK LLP, which is authorised and regulated by the Financial Conduct Authority in the UK under Registration Number 435658.
